

Unotusk Pre-Launch Site — QA Report

Manual walkthrough

Site: <https://prelaunch.unotusk.com/>

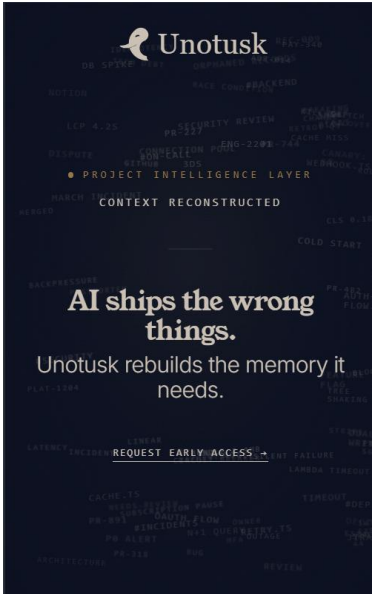

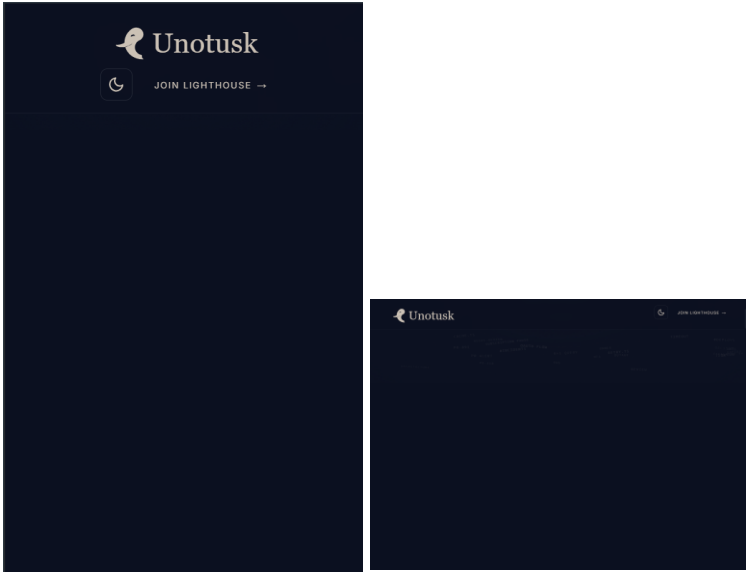

Tested by: Naren N

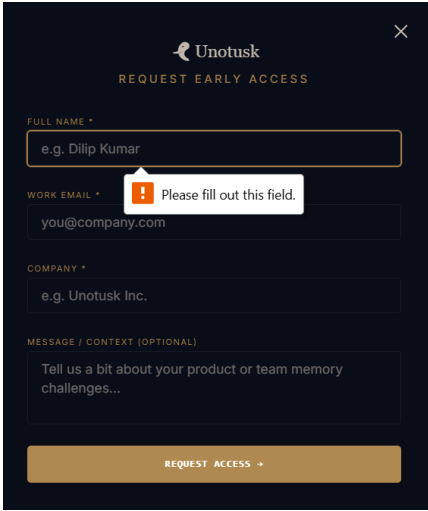

Date: 12 July 2026

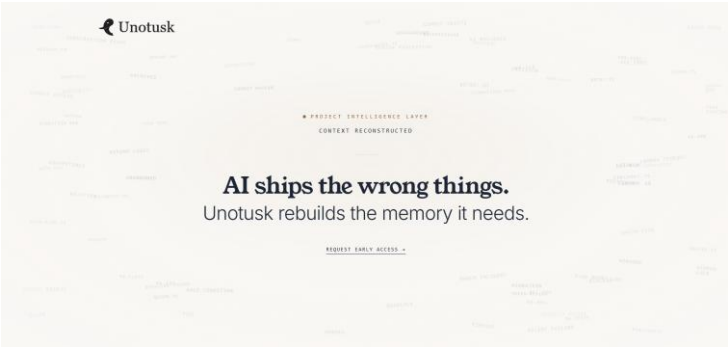

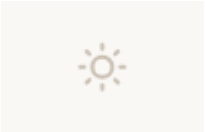

Covered: Dark Mode and Light Mode, on every page/section/component · Desktop at 1920×1080, 1440×900, 1366×768, 1024×768 · Mobile at 390×844 and iPhone SE 375×667

Severity key: **Blocker** (fix before launch) **High** (fix before launch if possible) **Medium** (should fix) **Low** (polish, nice to have)

#	Screenshot	Issue & Location	Type	Device	Severity
1		Header – When the website loads for the first time, the "Join Lighthouse" button and theme toggle are not visible . They only appear after scrolling.	Animation/Layout	Both	Blocker
2		Header – The theme toggle cannot be clicked until it becomes visible after scrolling. Once visible, it works normally.	Button/Interaction	Both	Blocker
3		The counter animation is malfunctioning, causing the initial "0%" and the final "95%" to render simultaneously on top of one another. Because the previous numbers fail to clear out during the transition, it creates an overlapping, unreadable visual mess in the center of the page.	Layout	Both	Blocker
4		Entire Website (Mostly Mobile) – While scrolling, buttons take a long time to respond . On smaller mobile screens, the "Request Access" button sometimes doesn't open the modal at all.	Performance	Both	Blocker

#	Screenshot	Issue & Location	Type	Device	Severity
5		Mobile Layout – Most sections work, but some layouts and animated elements need better optimization for smaller screens and different mobile sizes.	Responsiveness	Mobile	High
6		Scroll Animation – While scrolling between some sections, there are large empty spaces , making the page feel like it has stopped or frozen.	Layout/Animation	Both	High

#	Screenshot	Issue & Location	Type	Device	Severity
7		Request Access Form – Invalid or empty fields don't show clear error messages . Users only see the browser's default validation or a border highlight.	Form/CTA	Both	Medium
8		Request Access Modal – The "Request Access" submit button shows the normal cursor instead of a pointer when hovered.	Button/Interaction	Desktop	Medium
9		Theme Toggle – The theme switch button doesn't have an accessible label , making it difficult for screen readers to identify its purpose.	UI/UX (Accessibility)	Both	Medium
10		Footer – www.zephvion.com appears as plain text instead of a clickable link and doesn't explain what it refers to.	Content/Copy	Both	Medium

#	Screenshot	Issue & Location	Type	Device	Severity
11		Light Mode –Some Labels have very low contrast and are difficult to read.	Typography/Colour	Both	Medium
12		Theme Toggle (Light Mode) – The theme toggle blends into the background because its border is barely visible until hovered.	UI/UX	Both	Medium
13		Theme Toggle (Mobile) – The theme toggle button is too small to tap comfortably on mobile devices.	UI/UX	Mobile	Low
14		Request Access Modal – The form keeps previously entered values after closing and reopening. Please confirm if this is intended behavior.	Form/CTA	Both	Low

Next steps

- Fix all Blocker and High items before release; these break the core sign-up flow and are visible to every first-time visitor.
- Medium items should be fixed where possible; a few need a quick confirm with design on intent (left alignment, modal draft persistence).
- Low items are polish — fine to batch for a follow-up pass.
